

# Flyer Trading Network

Rapidly load, trade and allocate for the next generation trader

**Flyer Trading Network** is your secure broker-neutral network with a universal translator normalizing all of your counterparty connectivity. Now your trading system can connect anywhere without the hassle of integrating and managing your own FIX engine or developing custom counterparty interfaces. Bypass existing expensive networks and simplify the integration to your Portfolio or Order Management Systems.

## Orders

- | Transform, validate and normalize your order files into real-time, industry standard FIX order messages at over 20,000 orders/second
- | Eliminate proprietary order entry systems so you can have one consistent and easy to replicate workflow with all of your counterparties
- | Already certified for trading and allocations with many brokers
- | Receive executions in your own format for near real time or end of day updating and drop copying

## Allocations and End-of-Day Processing

- | Handles pre- and post-trade allocations intra day or end of day
- | Translates your allocation file to and from your broker, whether it's proprietary or FIX
- | Handles unprecedented speeds so that you can bypass inefficient legacy systems without a major infrastructure investment
- | Automatically matches and blocks executions to simplify post trade processing
- | Process End-of-Day files for reconciling quickly with your own systems
- | Drop copies can be sent back to multiple systems to keep you in sync

## Algorithms

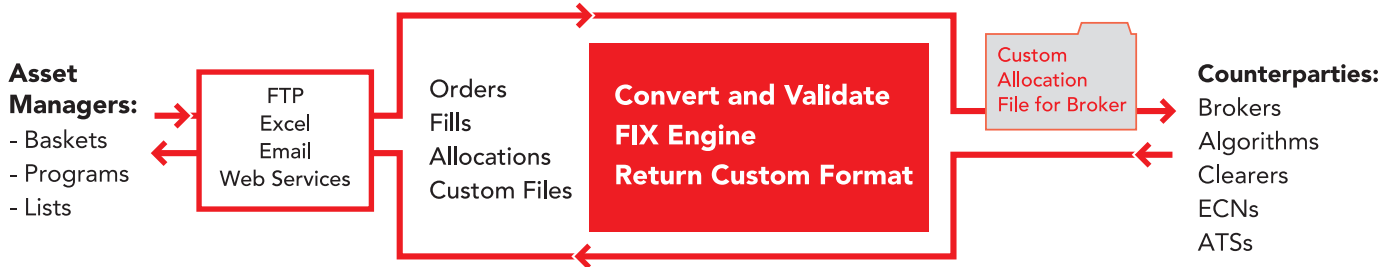

- | Access your broker's algorithms so you can pounce on new market opportunities
- | New broker algorithms are quickly added using the industry led Algorithm Template Description Language (ATDL)
- | Create your own custom algorithms that run from our servers, giving you more freedom from your brokers

## Technology and Integration

- | Zero install software so you can start trading straight away
- | Send order and allocation files using ftp or email attachments directly from your proprietary applications
- | Securely hosted at our industry standard data center with Flyer's own network grade FIX engine infrastructure
- | Eliminates the need for buy-side, in-house FIX engines, FIX developers or certification
- | Validates and normalizes security symbols protecting you from costly errors
- | Introduces processes so you can simplify your workflow
- | Measure your broker's performance intra-day with web-based monitoring tools and emails

Send orders and allocations  
directly from your proprietary applications

## Flyer Trading Network

“FIX Flyer realizes the dream for a true web experience — simple, elegant and fits right into my world. We can reach our sponsors in a highly automated way giving us the confidence to deliver unprecedented portfolio management capabilities to our clients. It's a perfect fit for managers who feel they are handcuffed to the demands and costs of larger FIX networks”

— Kin Ng, head trader at Atalanta Sosnoff Capital., LLC.

### Traders start your engines!

Developed by the leaders in FIX technology,  
our order execution platform gets you trading fast!
